## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-13, drawn to a compound comprising a nuclear targeting peptide and a nonclassical nuclear localization signal, and a first method of use.

Group II, claim(s) 14, drawn to a second method of using a compound comprising a nuclear targeting peptide and a nonclassical nuclear localization signal, i.e. a method of treating a patient by administration of a nucleic acid.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking the groups is a compound comprising a nuclear targeting peptide and a nonclassical nuclear localization signal, however this feature cannot be a special technical feature under PCT Rule 13.2 because it does not constitute a contribution over the prior art. For example, Thatcher et al (WO 96/41606) teach a composition comprising a cationic peptide scaffold, and the nonclassical nuclear localization targeting peptide encoded by SEQ ID NO:3 of the instant invention.

Art Unit: 1635

Because the only technical feature linking the two inventions cannot be a special technical feature under PCT Rule 13.2, a lack of unity of invention exists.
